

## Blockchain Application Engineer

[Apply Now](#)

Company: Saphunt

Location: Indonesia

Category: other-general

### The Offer

Great Opportunity

### The Job

#### Responsibilities :

Responsible for implementing and maintenance of the match node (L3 matchmaking) for trustless transactions.

Coordinate the implementation of Zero-Knowledge (ZK) Proofs and ZK circuit to create the transactions.

Utilising the Blockchain Layer 3 concepts, successfully implement the L3 matchmaking consensus.

Support development of zero-knowledge proof, DApp integration and design integration.

### The Profile

#### Skills Required:

Self-starter, focused on achieving outcomes and enjoys learning.

Curiously passionate about Blockchain, Cryptography and related technologies.

Strong competence in algorithmic and programming skills, particularly with Go Programming Language, Go goroutine, Golang Channel & Golang Lock.

3 years and above Go development experience.

Experience with database operations such as MySQL and Redis.

Preferably understand and written smart contract protocols using Solidity.

Preferable experience with developing Trading related systems and products.

Good command of English and Chinese language due to communication and documentation in such medium.

### **The Employer**

Our client is developing an order book-centric Decentralised Exchange (DEX) trading protocol that is secured by Ethereum, utilising a Decentralised Autonomous Organisation (DAO) structure that has full control over its treasury. As a next-gen DEX, the client aims to make decentralised exchange trading mainstream and accessible to all, with key features such as Order Book Trading, Leverage Capabilities, and Super-fast Transaction Times amongst others.
