PT Bintani Megahindah merupakan group perusahaan tambang mineral selaku pemilik & yang mengoperasikan penambangan bijih besi di wilayah Maluku dan sekitarnya. Untuk mendukung proses produksi penambangan, kami membutuhkan tenaga professional yang memiliki motivasi tinggi dan berpengalaman untuk mengisi posisi berikut:

Processing Plant Manager

Job description:

Compilation of Process Description.

Design of the process control logic adhering to appropriate safety standards, and documentation into Functional Descriptions.

Display full competence and independence in the compilation of P&IDs and all levels of control philosophies.

Process specifications portray the appropriate information and design intent.

Process review of equipment bids.

Compile operating cost estimates including estimation of consumables, labor, maintenance materials and power.

Provide input to capital cost estimates.

Prepare written project reports.

Liaising with other discipline engineers to ensure design development activities conform to process requirements.

Contribute to hazard studies.

Play a lead role in on-site commissioning of new equipment and process systems.

Qualifications:

Mineral Processing, Metallurgical degree.

15+ years of experience in Mineral Processing or closely related industry.

10+ years' experience in increasingly challenging positions.

10+ years' experience performing engineering-related design or oversight of designs.

5+ years' experience in managing an engineering and design team.

Registration as a Professional Engineer is required or ability to obtain registration within six months.

Extensive design, commissioning and/or operational experience of minerals processing equipment and processes (comminution, flotation, DMS, gravity separation, leaching, screening, thickening, filtration, ADR, solvent extraction, electro winning, pressure oxidation, roasting, heap leaching, crystallization, drying, etc.).

Experience in scoping and management of metallurgical test work programs (bench scale, pilot scale, on-site testing).

Experience in modelling of minerals processing equipment and systems.

Ability to lead processing engineering tasks on a project, within the allocated budget and schedule, including mentoring and guidance of junior colleagues and professional interaction with other project disciplines.
